

New for 2017 - 1066 William's March on London

14th October 1066 seems such a terminal date in English history but life continued.

'1066 William's March on London' is an engaging account of what happened next as Duke William sought to consolidate his invasion of Anglo-Saxon England.

This is the story of Duke William's strategy that culminates in his coronation at Westminster Abbey on 25th December 1066 and ends on New Year's Eve.

Portrayed by his chroniclers as 'a generous and accommodating man' the reality is a little different as his plan unfolds and he cuts a wave of destruction across southern England with little opposition.

This talk delves a little deeper into the background and intrigue that surrounded the important events of that October, November and December starting with the aftermath of the Battle of Hastings.

It is based on all the evidence available for William's march to London and brings it together in a logical, understandable and entertaining format.
